

# AEM10900 – WLCSP 16 Quick Start Guide EVK

## FEATURES

### Connectors

- 1 screw connector for the photovoltaic cell.
- 1 screw connector + 1 JST connector for the storage element.
- 1 screw connector for thermal monitoring.

### Configuration

- 1 R\_MPP[0] header to define the MPP ratio linked to the harvester technology.
- 1 TH\_MON header to enable/disable the thermal monitoring.
- 6-pin header for the I<sup>2</sup>C communication.
- 2 headers for the I<sup>2</sup>C\_ADDR and DIS\_STO\_CH features.

### Reset

- 1 reset button (press for 5 seconds minimum to reset the AEM).

### Size

- 79mm x 49mm.
- 4 x M2.5 mounting holes.

## SUPPORT PCB

### BOM around the AEM10900

	Designator	Description	Quantity	Manufacturer	Part Number
Mandatory	U1	AEM10900	1	e-peas	order at sales@e-peas.com
	Battery	Battery with 2.8 V min. voltage	1	To be defined by user	
	LDCDC	Power inductor 6.8 µH 1.15A 1008	1	TDK	VLS252012HBX-6R8M-1
	CSRC	Ceramic capacitor 22 µF 6.3 V 20% X5R 0402	1	Murata	GRM158R60J226ME01
	CINT	Ceramic capacitor 22 µF 6.3 V 20% X5R 0402	1	Murata	GRM158R60J226ME01
	CSTO	Ceramic capacitor 22 µF 6.3 V 20% X5R 0402	1	Murata	GRM158R60J226ME01
	RZMPP	Resistor for ZMPP functionality	1	To be defined by user	
Optional	R1, R2	Pull-up 1kΩ Resistors for I <sup>2</sup> C interface	2	Yageo	AC0603FR-071KL
	Rth	10kΩ NTC thermistor for temperature monitoring	1	Murata	NCP15XH103J03RC
	Rdiv	Resistor 22kΩ 1%	1	Yageo	PNRC0402FR-0722KL

**Footprint & Symbol:** information available on the datasheet.

## STEP 1: AEM10900 WLCSP 16 configuration

- **MPP timing :**

Configuration	Availability Through Pins		MPP Timing	
	I <sup>2</sup> C Interface <sup>1</sup>	Configuration pins <sup>2</sup>	Sampling duration $T_{VOC}$ [ms]	Sampling period $T_{MPPT}$ [ms]
LLL	yes	no	2	64
LLH	yes	no	256	16384
LHL	yes	no	64	4096
LHH	yes	no	8	1024
HLL	yes	no	4	256
HLH	yes	no	2	128
HHL	yes	no	4	512
HHH	yes	yes	2	256

1. For I<sup>2</sup>C configuration, T\_MPP[2:0] value is set thanks to the MPPTCFG[6:4] register (see datasheet).

2. T\_MPP[2:0] configuration only available by I<sup>2</sup>C interface (default configuration is HHH).

- **MPP ratio: R\_MPP[0] (seen as HIGH if left floating)**

Configuration	Availability Through Pins		MPPT ratio
R_MPP[3:0]	I <sup>2</sup> C Interface <sup>1</sup>	Configuration pins <sup>2</sup>	$V_{MPPT} / V_{OC}$
LLLL	yes	no	Reserved
LLLH	yes	no	90%
LLHL	yes	no	65%
LLHH	yes	no	60%
LHLL	yes	no	85%
LHLH	yes	no	75%
LHHL	yes	yes	70%
LHHH	yes	yes	80%
HLLL	yes	no	35%
HLLH	yes	no	50%

1. For I<sup>2</sup>C configuration, R\_MPP[3:0] value is set thanks to the MPPTCFG[3:0] register (see datasheet).

2. Only R\_MPP[0] setting is available by GPIO configuration (R\_MPP[3:1] = LHH in that case).

- **Storage element threshold voltages:**

Configuration	Availability Through Pins		Storage Element Threshold Voltage	
	I <sup>2</sup> C Interface <sup>1</sup>	Configuration pins	$V_{OVCH}$	$V_{OVDIS}$
STO_CFG[2:0] <sup>1</sup>				
LLL	yes	no	4.50 V	3.30 V
LLH	yes	no	4.00 V	2.80 V
LHL	yes	no	3.63 V	2.80 V
LHH	yes	no	3.90 V	2.80 V
HLL	yes	no	3.90 V	3.50 V
HLH	yes	no	3.90 V	3.01 V
HHL	yes	no	4.35 V	3.01 V
HHH	yes	yes	4.12 V	3.01 V

1. STO\_CFG[2:0] configuration only available by I<sup>2</sup>C interface (default configuration is HHH).

- **Thermal monitoring:**

Enable thermal monitoring by placing a jumper on the dedicated header to connect TH\_MON to THERM.

Disable thermal monitoring by placing a jumper on the dedicated header to connect TH\_MON to VINT.

- **Configuration mode:**

- DIS\_STO\_CH : Connect to L to enable the charge of the storage element, connect to H to disable it (seen as LOW if left floating).
- I<sup>2</sup>C\_ADDR: Connect to H for AEM I<sup>2</sup>C address = 0x41, connect to L for I<sup>2</sup>C address = 0x40 (seen as HIGH if left floating).

- **I<sup>2</sup>C communication:**

All the AEM configurations, as well as various information are available through I<sup>2</sup>C communication. See the AEM00900 datasheet for more details.

**STEP 2:** Connect a storage element with a voltage higher than 2.8 V

**STEP 3:** Connect a photovoltaic single cell

- Internal boost efficiency vs. input voltage (LDCDC = 6.8  $\mu$ H):
